

Hello,

I'm Brett Graves, and I'm excited to apply for opportunities where I can bring my technical skills, drive, and mindset to a new team. I have worked in IT and software development at Komatsu where I had the chance to take on a wide range of projects, lead initiatives, and figure things out on the fly. One of my biggest strengths is that I do not get stuck. If I do not know something, I will teach myself, ask smart questions, and work through it until I get results. That mindset has helped me jump into everything from SQL automation, API integrations, Azure cloud work, and DevOps pipelines, to improving customer-facing systems and troubleshooting live issues.

What excites me most about any role is the chance to keep learning, take on challenges, and help improve how teams and systems work. I am someone who adapts quickly and can shift between technical tasks and team collaboration without missing a beat. Whether I am leading a project or supporting others, I stay focused on delivering solutions and creating a positive impact for both the team and the customer.

I would love the chance to connect and share more about how I can bring value to your team. Thank you so much for your time and consideration.

Brett Graves
